

All of us, at Doppler S.A., send our season's greetings with best wishes for the New Year 2012.

Hope the coming year brings us loads of opportunities to work together and achieve the goals we have wished for.

Our best wishes for health and joy to everyone!!!

Keighley Lifts UK Ltd is a well established, family run Lift business, with over 30 years experience, supplying & fitting New Lift packages.

Over the past 3 Years, Keighley Lifts has been working in partnership with Doppler Lift Manufacturers, producing quality new bespoke Lift installations to The Public & Private sector, throughout the UK.

Keighley Lifts UK was approached by one of Harley Davidson's motor bike franchise to provide a special designed Car Lift for their new showroom in Chester.

The design was specific for the Harley Davidson Motor bike, with its shape and size.

The lift was required for transferring Motor bikes to their upper level showroom and workshops.

Also the outside Lift entrance need to be unlocked out of normal working hours, so that new bike deliveries could be placed in the Car Lift for security and without the Lift being able to take calls to destinations within the building.

Keighley Lifts, Mr. Stuart & Garry Boocock worked with Mr. Kostas Andreadis & Mr. Evaggelos Karamitopoulos from Doppler, in the designing of this unique Lift. After some weeks of rejected solutions, one design was approved and proposed to Harley Davidson whose people were highly delighted.

They also redesigned a building layout to accommodate a New Passenger Lift for the public to use for the upper level showroom.

Doppler Lift Manufacturing worked to tight delivery schedules, so that Keighley Lifts could complete the installation on time, for the Grand opening of Harley Davidson new showroom. Everything went like clockwork with the dedicated Workforces of Keighley Lifts installation department and Doppler Lifts Sales & Design teams.

Since then Keighley Lifts with Doppler Lift manufactures have completed a BMW Motor Bike Franchise showroom with Special design feature.

This was awarded on the back of both companies' success and experience with the Chester Project.
